

TELEBLOC

MEDIUM FREQUENCY ACCESS WITH
LIFT AND SLIDE OPERATION

CPS3 TRIPLE LEAF

All Telebloc units are post galvanised in excess of BS EN 1461. Post Galvanised coating thickness is available in 3 grades of finish to suit the specific project geographical location. Telebloc units should be designed to cater for their intended application and should last the life of the project. See chart on page 41 for the various grades of corrosion protection required to meet the designers obligations on Whole Life Costing for the project.

Inwardly tapered tray side to prevent jamming.

DDA Compliant Lifting points. 'Lift and Slide Operation'

Varying tray depths

Full flange for stability in service

6mm thick steel cover for minimal deflection and ease of removal.

6mm thick steel frame for increased impact resistance. (vertical and horizontal)

Compliant products

GA galvanizers association

Jones of Oswestry provides RIBA approved CPD support for designers and architects in the subject of true sustainable design.

TELEBLOC

CPS3 TRIPLE LEAF

GENERAL TECHNICAL DETAIL, COMPOSITION AND MANUFACTURE

APPLICATION

External paved areas where:-

- Aesthetic finish is important
- Public domain therefore anti slip and anti trip measures important
- DDA compliance is a design minimum
- Removal of a cover by a single person may be required

MECHANICS, PERFORMANCE

In order to ensure the covers continue to perform for their design life all Jones Telebloc covers are tested to BS EN 124 load classifications as listed pg 40. Further design considerations include deflection under actual live loading to protect finishes from damage in service.

Damaged or proud infill constitutes the most common complaint by the general public and constitutes a large part of injury claims on local authorities from slip and trip.

COMPOSITION, MANUFACTURE

Covers are fully welded fabrications using a minimum of 6mm thick structural steel plate.

Access covers are tapered inward at their base to ensure adequate clearance for removal in service.

Lifting points are integral to each access cover and include a fully welded, robust finish to cater for the filled weight of recessed access covers in service.

Lifting points are positioned central on the covers near-side to facilitate

the lift and slide removal action, specific to Telebloc. Frame units include heavy duty 'T' section format around all sides of the unit. Pierced anchor points together with a full width seating ensures that any load is transmitted back to supports with less risk of localised failure in the bedding material.

CLEAR OPENING SIZE CHART

LOAD CLASSES, BS EN 124

EUROPEAN STANDARD FOR ACCESS COVERS

LOAD CLASSES	TEST LOAD	SUGGESTED AREAS OF USAGE	SPECIFYING CODE
A15 	15kN (1.5 Tonne)	Pedestrian and Cycle Areas	/A
		Recommended S.M.W.L. Not exceeding 1 Tonne	
B125 	125kN (12.5 Tonne)	Pavement, Pedestrian Zones, Car Parks & Verges	/B
		Recommended S.M.W.L. Not exceeding 6 Tonne	
C250 	250kN (25 Tonne)	Slow moving occasionally trafficked areas i.e Service Roads, Vehicular Access Areas, Parking Areas etc.	/C
		Recommended S.M.W.L. Not exceeding 11.5 Tonne	
D400	400kN	Contact our technical support team for advice on exceptionally heavy vehicled areas.	/SD
E600	600kN		/SE
F900	900kN		/SF

ALTHOUGH NOT COMPLYING WITH BS EN 124, OTHER INTERMEDIATE LOAD CLASSES ARE AVAILABLE, CONSULT OUR TECHNICAL DEPARTMENT

SECTIONAL DETAILS

Frame depths of 88 & 104 to suit tray depths of 70 & 86 for corresponding block thicknesses of 65 & 80

DIMENSIONS

Installation dimensions, based around chamber clear openings are as shown. Although example clear opening sizes are tabulated, TELEBLOC is available in any size to suit specific project requirements. See above for tray depth details. Frame depths are manufactured to 50 and 65mm block depths plus 38mm. The number of individual cover trays is dictated by both chamber clear opening and infill density.

ACCESSORY SUFFIXES

To specify add the following suffixes to the professional specification code

- A3 - Unsealed / Plain Seated
- A4 - Vented
- B4 - Locking Down Bolts
- B5 - Hasp & Staple
- B8 - Security Screw Locking
- E1 - Stainless steel edging
- E2 - Brass edging
- H1 - Service ID (please specify)

FINISHES

How to use the Longevity Table

1. Locate your site on the Millennium map (E.g. Leeds - West Yorkshire)
2. Match the corrosion category square colour to the key (Leeds = 3 light blue)
3. Read down from Product Design Life to establish required minimum life i.e. 25 years.

4. Once minimum Product Design Life has been established, (20,25 or 30 years) cross reference with your site location category (1,2,3,4 or 5) to determine your required Duragalv finish. (Duragalv 100)
5. At the end of the specifying code
DG100 needs to be added.

Coating suffix specifying codes:
 Duragalv70 = DG70
 Duragalv100 = DG100
 Duragalv140 = DG140

Fabricated mild steel products, Hot-Dip Galvanised after manufacture = GALVANISED LONGEVITY TABLE					
Rate of corrosion of zinc (in microns per annum).	2.5	3	3.5	4	4.5
