

AQUADISH

SLOTTED HINGED DISHED GULLY GRATING FOR BLOCK PAVIORS

DSA

All Aquadish units are post galvanised in excess of BS EN 1461. Post Galvanised coating thickness is available in 3 grades of finish to suit the specific project geographical location. Aquadish units should be designed to cater for their intended application and should last the life of the project. See chart on page 101 for the various grades of corrosion protection required to meet the designers obligations on Whole Life Costing for the project.

Inwardly tapered tray side to prevent jamming.

DDA compliant slots

Hinged

Locking required. A locking type is required to secure cover in closed position. Specify from accessories.

Max. dish to suit DDA

6mm thick steel cover for minimal deflection and ease of removal.

Full flange for stability in service

6mm thick steel frame for increased impact resistance.

Compliant products

Jones of Oswestry provides RIBA approved CPD support for designers and architects in the subject of true sustainable design.

GENERAL TECHNICAL DETAIL, COMPOSITION AND MANUFACTURE

APPLICATION

Point drainage gratings within run of dish drainage blocks to pedestrianised areas

- Public domain therefore trip and slip measures important
- Single person operation for maintenance (subject to size)
- DDA compliance is a design minimum

GENERAL

Aquadish fabricated hinged drainage gratings and frames are manufactured specifically to provide point drainage to linear shaped gulleys within a hard landscape area.

The Aquadish drainage grating system is available in a range of sizes to suit specific site requirements and frame depths to suit specific surrounding finishes with their respective bedding.

MECHANICS, PERFORMANCE

In order to ensure the gratings continue to perform for their design life all Aquadish units are available in a range of load classifications as listed overleaf.

Jones deflection criteria ensures that the amount of deflection when subject to serviceability loading is limited, and hence greatly reducing the risk of damaged gratings.

Damaged pavement metalwork can lead to complaints from the general public and constitutes a large part of injury claims on local authorities from slip and trip.

All drainage slots are DDA compliant and provide a minimum number of slot rows to guard against surface water "run-over" in times of high rainfall.

Multiple slots also increase the hydraulic capacity of the units in service due to increased drainage slot area.

COMPOSITION AND MANUFACTURE

Gratings are full welded fabrications using a minimum of 4mm thick structural steel plate. Frame units include heavy duty 'T' section format to 2 sides of the unit. Pierced anchor points together with a full width seating ensures that any load is transmitted back to supports with less risk of localised failure in the bedding material.

DIMENSION TABLE

Overall top of frame	Overall base of frame	Clear openings	N.B. The sizes relate to 200 x 100 module, any size can be accommodated within the design. For a product code that suits the specific pavior, contact: techadvice@jonesofswestry.com
200 x 200	300 x 200	192 x 132	
300 x 200	400 x 200	292 x 132	
400 x 200	500 x 200	392 x 132	
500 x 200	600 x 200	492 x 132	
600 x 200	700 x 200	592 x 132

LOAD CLASSES, BS EN 124

EUROPEAN STANDARD FOR ACCESS COVERS

LOAD CLASSES	TEST LOAD	SUGGESTED AREAS OF USAGE	SPECIFYING CODE
A15 	15kN (1.5 Tonne)	Pedestrian and Cycle Areas	/A
		Recommended S.M.W.L. Not exceeding 1 Tonne	
B125 	125kN (12.5 Tonne)	Pavement, Pedestrian Zones, Car Parks & Verges	/B
		Recommended S.M.W.L. Not exceeding 6 Tonne	
C250 	250kN (25 Tonne)	Slow moving occasionally trafficked areas i.e Service Roads, Vehicular Access Areas, Parking Areas etc.	/C
		Recommended S.M.W.L. Not exceeding 11.5 Tonne	
D400	400kN	Contact our technical support team for advice on fast moving and/or exceptionally heavy vehicled areas.	/SD
E600	600kN		/SE
F900	900kN		/SF

ALTHOUGH NOT COMPLYING WITH BS EN 124, OTHER INTERMEDIATE LOAD CLASSES ARE AVAILABLE, CONSULT OUR TECHNICAL DEPARTMENT

SECTIONAL DETAILS

ACCESSORY SUFFIXES

To specify add the following suffixes to the professional specification code

- B4** - Locking bolts.
- X** - Grade 304 Stainless Steel Construction
- Y** - Grade 316 Stainless Steel Construction

DIMENSIONS

Installation dimensions, based around metric block sizes and overall outside frame dimensions are as tabulated although Aquadish units are manufactured to complement the precise shape of the chosen gully blocks.

Grating depths vary to suit load and span. Frame depths vary to suit surrounding paviers and their respective bedding thicknesses.

AQUADISH

DSA • REFERENCE CODE

FINISHES

How to use the Longevity Table

1. Locate your site on the Millennium map (E.g. Leeds - West Yorkshire)
2. Match the corrosion category square colour to the key (Leeds = 3 light blue)
3. Read down from Product Design Life to establish required minimum life i.e. 25 years.
4. Once minimum Product Design Life has been established, (20,25 or 30 years) cross reference with your site location category (1,2,3,4 or 5) to determine your required Duragalv finish. (Duragalv 100)
5. At the end of the specifying code DG100 needs to be added.

Coating suffix specifying codes:

- Duragalv70 = DG70
- Duragalv100 = DG100
- Duragalv140 = DG140
